JOURNAL OF MOLECULAR DIAGNOSTICS AND THERAPY

Monthly Volume 12 Number 8 August 2020

CONTENTS

COMMENTS

Research advances of germline predisposition factors of myeloid neoplasms

ORIGINAL ARTICLES

Establishment of industry standards for fetal chromosome aneuploidy including trisomy 21 trisomy 18 and trisomy 13 Next Generation Sequencing

Preimplantation genetic diagnosis of Marfan syndrome using next generation sequencing

The value of T cadherin expression in predicting the prognosis of gastric cancer after radical operation

Establishment the protocol of CD34⁺ cell percentage and absolute counting by E 6 flow cytometer

Expression and significance of serum TK1 and E cadherin in children with acute lymphoblastic leukemia

Expression level and clinical significance of circRNA in cancer tissues and serum of patients with non small cell lung cancer

Study on the value of combined diagnosis of acute myocardial infarction by CK MB cTnl coronary angiography and electrocardiogram

Correlation of miR 126 and miR 96 with platelet activation and short term prognosis in patients with acute myocardial infarction

Study on the diagnosis and prediction of hypertension with atrial fibrillation by RDW

HU Jianping, YU Lin, ZHOU Enping

The expression and significance of serum Lp PLA2 and CD147 in patients with carotid atherosclerosis

Relationship between hs CRP NF B VCAM1 and the condition and prognosis of ischemic cerebrovascular disease

Expression of prealbumin and procalcitonin in neonatal hyperbilirubinemia and its correlation with myocardial enzyme spectrum

Application of serum inhibin A combined with placental growth factor in prenatal screening of Down s syndrome in early pregnancy

Analysis of the relationship between SATB1 expression and chemotherapy resistance and prognosis in nasopharyngeal carcinoma

Predictive value of TGF- β 1 and Treg cell count in umbilical cord blood for bronchopulmonary dysplasia in preterm infants

Evaluation value of axon growth inhibitory factor A and nuclear factor κ B p65 on the condition and prognosis of patients with acute hypertensive cerebral hemorrhage

Expression of CCL18, HIF-1 and MIF mRNA in human gliomas and the value of prognostic assessment

The application value of CRP and PCT combined with pulmonary infection score in the diagnosis and prognosis of pulmonary infection in ICU

Correlation between serum levels of IL-6, IL-8 and IL-10 and coronary artery lesions in children with *Mycoplasma pneumoniae* infection and Kawasaki disease

Application value of combined detection of serum PAPP-A, free hCG and PLGF in the diagnosis of Down Syndrome in early pregnancy

Changes of Th1/Th2 and related cytokines IFN- γ , IL-10 in painless birth and its significance

Evaluation of plasma CD64, PCT and hs-CRP levels after acute leukemia chemotherapy combined with bacterial infection prognosis

Expression of EGFR and VEGF in astrocyte tumor tissues and their correlation with pathological grade

The relationship between expressions of PD-L1, Vim and Zeb1 in esophageal carcinoma tissues and radiotherapy sensitivity

Analysis of the clinical therapeutic effect of terbutaline sulfate combined with budesonide atomization on children with bronchial pneumonia

The clinical significance of D-Dimer, CRP, PAF and platelet parameters in children with severe MPP

miR-182-5p regulates the proliferation, invasion and migration of bladder cancer cells through the *HOXB7* gene

Predictive value of serum CYR61 and IGF-1 levels for healing delay after tibial plateau fracture surgery

A case of infantile inflammatory bowel disease and literature analysis

Correlation between exhaled nitric oxide and peripheral blood eosinophils in patients with asthma and the value of combined detection

Analysis of pathogenic bacteria distribution and drug resistance in hospital acquired pneumonia patients with acute cerebral infarction

The diagnostic value of joint fluid AD-1, SDF-1 and SicAM-1 in postoperative infection after artificial humeral head replacement and their relationship with postoperative rehabilitation

REVIEWS

Epidemiological analysis of cervical lesions and new development of cervical cryotherapy

ABSTRACT Objective To evaluate the value of next-generation sequencing in preimplantation genetic diagnosis of Marfan syndrome. Methods A Marfan syndrome carrier was screened for the FBN1 gene mutation site by next-generation sequencing in the clinical genetics center of Xuzhou Children's Hospital in October 2016. The sequencing results indicated that the carrier had a mutation in the FBN1 gene. Results The carrier had a mutation in the FBN1 gene. Conclusion Next-generation sequencing is used for preimplantation genetic diagnosis. Results The carrier had a mutation in the FBN1 gene. Conclusion Next-generation sequencing is used for preimplantation genetic diagnosis.

Expression level and clinical significance of circRNA in cancer tissues and serum of patients with non-small cell lung cancer

YANG Guangquan L : 3 @ 9 C [S 3 e @ J [[Y I S G 8 W [

6 W b S d f _ W ` f a 6 W k ` S U a ` ^ B a W a b e ^ b W k S S ^ E [U Z 5 8 [` (\$ * " " "

ABSTRACT Objective To explore the expression level and clinical significance of circRNA in cancer tissues and serum of patients with non-small cell lung cancer. Methods The peripheral blood tissue specimens of 100 patients with non-small cell lung cancer were collected. CircRNAs in the peripheral blood tissue specimens and peripheral blood serum were screened out by high-throughput sequencing. Results The expression level of circRNA in cancer tissues and peripheral blood serum was significantly higher than that in normal tissues and peripheral blood serum. Conclusion The expression level of circRNA in cancer tissues and peripheral blood serum is significantly higher than that in normal tissues and peripheral blood serum, which may be related to the occurrence and development of non-small cell lung cancer.

Study on the diagnosis and prediction of hypertension with atrial fibrillation by RDW

IU Cunxin : G < [S ` kbC > [L : A G 7 ` b [` Y
 6 W b S d f _ W ` f a X 6 S ` d V e ž S æ B W a e b b ^ 6 S Y e Z S ` 6 [Z [` \$ & ' " " "

ABSTRACT Objective To explore the predictive value of red blood cell distribution width (RDW) in the diagnosis and prediction of hypertension with atrial fibrillation. Methods A total of 1000 patients with atrial fibrillation were included in the study. The patients were divided into two groups: the control group (n=500) and the study group (n=500). The control group consisted of patients with atrial fibrillation but without hypertension, and the study group consisted of patients with atrial fibrillation and hypertension. The RDW values were measured for all patients. Results The RDW values in the study group were significantly higher than those in the control group (P < 0.05). The RDW values were significantly higher in patients with hypertension than in those without hypertension (P < 0.05). The RDW values were significantly higher in patients with atrial fibrillation and hypertension than in those with atrial fibrillation but without hypertension (P < 0.05). Conclusion RDW is one of the basic clinical detection indicators for the diagnosis and prediction of hypertension with atrial fibrillation.

ABSTRACT Objective To investigate the expression and significance of serum Lp-PLA2 and CD147 in patients with carotid atherosclerosis. Method 87 patients with carotid atherosclerotic stenosis in hospital were selected in our hospital from January 18 to February 21, 2011 and divided into the stable plaque group (n=42) and the unstable plaque group (n=45). The levels of Lp-PLA2 and CD147 in serum were measured by enzyme-linked immunosorbent assay (ELISA). The difference in serum Lp-PLA2 and CD147 levels between the two groups was compared. Results The levels of Lp-PLA2 and CD147 in serum were significantly higher in the unstable plaque group than in the stable plaque group. The difference in serum Lp-PLA2 and CD147 levels between the two groups was statistically significant (P<0.05). Conclusion The levels of Lp-PLA2 and CD147 in serum were significantly higher in patients with carotid atherosclerosis. The difference in serum Lp-PLA2 and CD147 levels between the two groups was statistically significant (P<0.05).

Application of serum inhibin A combined with placental growth factor in prenatal screening of Down's syndrome in early pregnancy

HUANG uezhen 5 : 7 @ C [S 5 3 ; S < [` E G W] > [^ [

6 W b S d f _ W ` f a X [; S a e ^ b S W U 3 X X [^ [S f W W : a e l b z f S Y e a z S E a Y g v a z W d ` ? W W [U S ^ ' \$ * & # '

ABSTRACT Objective To evaluate the combination of serum inhibin A combined with placental growth factor in prenatal screening of Down's syndrome in early pregnancy. Methods A total of 1170 pregnant women were divided into the control group (n=585) and the study group (n=585). The control group was screened for Down's syndrome using the traditional method of serum alpha-fetoprotein (AFP), human chorionic gonadotropin (hCG), and unconjugated estradiol (uE2). The study group was screened for Down's syndrome using the combination of serum inhibin A, placental growth factor (PGF), AFP, hCG, and uE2. Results The detection rate of Down's syndrome in the control group was 95.2%, and in the study group it was 98.7%. The combination of serum inhibin A and placental growth factor significantly improved the detection rate of Down's syndrome in early pregnancy. Conclusion The combination of serum inhibin A and placental growth factor is a more effective method for prenatal screening of Down's syndrome in early pregnancy.

Predictive value of TGF-β1 and Treg cell count in umbilical cord blood for bronchopulmonary dysplasia in preterm infants

LIN ingqing F 3 @ : g [IZ S K a ` Y XLS `GYI W[G 3 @ 9 K [` Y

6 Wb S d f _ W` f a XJ@V@a`V@a`Z@a`Y`d`W` \$ S Wg \ [5Z` [%\$ # " " (

ABSTRACT Objective To investigate the predictive value of TGF-β1 and Treg cell count in umbilical cord blood for bronchopulmonary dysplasia (BPD) in preterm infants. Study design This was a retrospective cohort study. Setting The study was conducted in a tertiary care hospital. Participants 160 preterm infants (24 weeks gestation) who were born at our institution between January 2012 and December 2013 and who were included in the study. Measurements and Main Results The predictive value of TGF-β1 and Treg cell count in umbilical cord blood for BPD was evaluated. Results The predictive value of TGF-β1 and Treg cell count in umbilical cord blood for BPD was evaluated. Conclusions The predictive value of TGF-β1 and Treg cell count in umbilical cord blood for BPD was evaluated.

ABSTRACT Objective To explore the evaluation value of axon growth inhibitory factor A and nuclear factor-kB p65 on the condition and prognosis of patients with acute hypertensive cerebral hemorrhage. Methods 100 patients with acute hypertensive cerebral hemorrhage were selected from the Department of Neurology, Xiangya Hospital, Hunan University of Traditional Chinese Medicine. They were divided into two groups: control group and observation group. The control group received conventional treatment, and the observation group received conventional treatment plus axon growth inhibitory factor A and nuclear factor-kB p65. The clinical efficacy and prognosis were compared between the two groups. Results The observation group had a significantly higher clinical efficacy and better prognosis than the control group (P<0.05). Conclusion Axon growth inhibitory factor A and nuclear factor-kB p65 can improve the clinical efficacy and prognosis of patients with acute hypertensive cerebral hemorrhage.

The application value of CRP and PCT combined with pulmonary infection score in the diagnosis and prognosis of pulmonary infection in ICU

HUANG Yang L : 3 @ 9 > 9 W A I W [

6 W b S d f _ W ` f a X ; ` f W > e [\ h W 5 \$ d W g W f a B W W W W V Z g [Z [` \$ % # ' " "

ABSTRACT Objective To explore the clinical value of CRP and PCT combined with pulmonary infection score in the diagnosis and prognosis of pulmonary infection in ICU. Methods 100 patients with pulmonary infection in ICU were selected as the study objects. The clinical data, laboratory data, and imaging data were collected. The results were analyzed by SPSS 13.0 software. Results The combined use of CRP and PCT combined with pulmonary infection score can improve the diagnosis and prognosis of pulmonary infection in ICU. Conclusion The combined use of CRP and PCT combined with pulmonary infection score can improve the diagnosis and prognosis of pulmonary infection in ICU.

Correlation between serum levels of IL-6 IL-8 and IL-10 and coronary artery lesions in children with Mycoplasma pneumoniae infection and Kawasaki disease

GUO uah E A @ 9 K S3aT d Wf [3 T g V g Z S d

ž B W V [S f d [U ; ` f B W V d [S f W f S ^ a X J [` \ [S G ` [h W d g f j k [` \ [5 S ` [Y * % " ' ' &

ABSTRACT Objective To investigate the correlation between levels of interleukin-6 (IL-6), interleukin-8 (IL-8) and interleukin-10 (IL-10) in children with Mycoplasma pneumoniae infection and Kawasaki disease. Methods The clinical data of 86 children with MP infection and KD were analyzed. Results IL-6, IL-8 and IL-10 levels were significantly higher in the KD group compared with the MP group. Conclusion IL-6, IL-8 and IL-10 levels are elevated in children with KD, suggesting a role for these cytokines in the pathogenesis of KD.

Expression of EGFR and VEGF in astrocyte tumor tissues and their correlation with pathological grade

ZHANG Chi K G 3 @ < [BS7 @ 9 9 SJ ; Y7 K g S ` EkG < y> ; G C [K'GY3 @ J [S > ; d g \$ a k g
6 Wb S d f _ W ` f a X J @ W \$ d Y k e S g d S W V f [d f S S ^ ^ E a g f 5 Z Z S ` [Y e 0 / S S [f [& \$ " " " *

ABSTRACT Objective To explore the expression of EGFR and VEGF in astrocyte tumor tissues and their correlation with pathological grade. Methods A total of 86 patients with astrocyte tumor tissues were collected from the hospital. The expression of EGFR and VEGF in tumor tissues was detected by immunohistochemistry (IHC). Results The expression of EGFR and VEGF in astrocyte tumor tissues was significantly higher in high-grade tumors than in low-grade tumors. Conclusion The expression of EGFR and VEGF in astrocyte tumor tissues is related to the pathological grade. The expression of EGFR and VEGF in tumor tissues is related to the pathological grade.

The relationship between expressions of PD-L1 Vim and Zeb1 in esophageal carcinoma tissues and radiotherapy sensitivity

FU Jiangping > 3 @ > [: 8 S ` 8 Y @ 9 J [S ` 9 A ` K Y a g @ A g k g l Z W `
 6 W b S d f _ W ` f a X ? W W \$ U Z a a 5 W a f d S S K : Z a g b W Z 1 5 S ↑ ` (% ' " " "

ABSTRACT Objective To study the relationship between the expression levels of PD-L1, Vim and Zeb1 in esophageal carcinoma tissues and radiotherapy sensitivity. Methods We collected 100 esophageal carcinoma tissues and analyzed the expression levels of PD-L1, Vim and Zeb1 by immunohistochemistry. Results The expression levels of PD-L1, Vim and Zeb1 were significantly higher in radiotherapy-resistant tissues compared to radiotherapy-sensitive tissues. Conclusion The expression levels of PD-L1, Vim and Zeb1 are related to radiotherapy sensitivity in esophageal carcinoma tissues.

The clinical significance of D - D CRP PAF and platelet parameters in children with severe MPP

ZHAO Na L : 7 @ 9 : g S C k g B W D g [\ g `

6 W b S d f _ W ` f a E W U W [V S 3 X I X [U e [S f W W : a e b [f S ^ @ S X k e S ` W k S \$ Z [? W V [U S ^ 5 a ^ ^ W Y W ` S &) % " ' *`

ABSTRACT Objective To investigate the clinical significance of D-dimer, CRP, PAF and platelet parameters in 13+ children with MPP in our hospital. The children were divided into the severe group and the mild group. Results The levels of D-dimer, CRP, PAF and platelet parameters were significantly higher in the severe group than in the mild group. Conclusion The clinical significance of D-dimer, CRP, PAF and platelet parameters in children with severe MPP is discussed.

Predictive value of serum CYR61 and IGF-1 levels for healing delay after tibial plateau fracture surgery

ZHENG Hailiang > ; G < [` Y

A d f Z a b W V [U e K 6 S W b Y S y d f S _ W ` F a ` Y Z W V X z z B [f v z Y ` \$ \$ # " & \$

ABSTRACT Objective To investigate the predictive value of serum CYR61 and IGF-1 levels for healing delay after tibial plateau fracture surgery. Methods A total of 65 patients with tibial plateau fracture were included in the study. The patients were divided into two groups: the control group and the study group. The control group received conventional treatment, and the study group received treatment with CYR61 and IGF-1. The healing time and the rate of healing delay were compared between the two groups. Results The healing time of the study group was significantly shorter than that of the control group (P<0.05). The rate of healing delay in the study group was significantly lower than that in the control group (P<0.05). Conclusion Serum CYR61 and IGF-1 levels are predictive factors for healing delay after tibial plateau fracture surgery.

A case of infantile inflammatory bowel disease and literature analysis

YANG Zhi | 3 @ 9 > [E`G @ L [8X3S@ 9 C [` Y5X W @ 9 4 S ` 5 : [7 @ Y4 [c g S ` 6 W b S d f _ W ` f a X ; ` 3 W U f [[B g a b [[e U S a v e 5 Z V X W P d W 5 Z [` \$ % " ' ' #

ABSTRACT Objective To deepen the understanding of the clinical characteristics of infantile IBD through one case of infantile ulcerative colitis. The patient was a 4-year-old boy with a 6-month history of abdominal pain, weight loss, and diarrhea. He was diagnosed with infantile IBD based on his clinical symptoms, laboratory tests, and colonoscopy. The histological and molecular genetic findings were consistent with ulcerative colitis. The patient was treated with 5-aminosalicylic acid and corticosteroids, and his symptoms improved. This case highlights the importance of a comprehensive clinical and laboratory evaluation in the diagnosis and management of infantile IBD.

Correlation between exhaled nitric oxide and peripheral blood eosinophils in patients with asthma and the value of combined detection

JIANG Yinling K 3 @ 9 I S ` # U Z E g ` 7 @ J [`

ž 6 W b S d f _ W ` f a X F W e : b V X d V [f 3 X K [^ [S f W V : a e b [f S W X W [3 Z g Z [? W V [U S ^ G ` [h 5 Z [` \$ % " " \$ ž 8 g ` U f [a ` S ^ 7 j S _ F Z S V f : [V X ` W b V b X S d f ^ [V S ` f f W V : a e b [f S ^ a X 3 ` Z g [? W h W d e [W X W [Z G Z [` \$ % " " " "

ABSTRACT Objective To explore the correlation between exhaled nitric oxide (eNO) and peripheral blood eosinophils (PBE) in patients with asthma and the value of combined detection. Methods 100 patients with asthma were selected from the Department of Respiratory Medicine, the First Affiliated Hospital of Anhui Medical University, and divided into two groups: the control group (CG) and the study group (SG). The CG consisted of 50 patients with normal lung function and no asthma, and the SG consisted of 50 patients with asthma. The eNO and PBE levels were measured in both groups. Results The eNO and PBE levels in the SG were significantly higher than those in the CG (P<0.05). The correlation coefficient between eNO and PBE in the SG was 0.625 (P<0.05). Conclusion The eNO and PBE levels are significantly elevated in patients with asthma, and there is a positive correlation between them. The combined detection of eNO and PBE has a high value for the diagnosis of asthma.

Analysis of pathogenic bacteria distribution and drug resistance in hospital-acquired pneumonia patients with acute cerebral infarction

TIAN Jinghua K 3 @ 9 B [> ; S C [` Y c g S `

6 W b S d f _ W ` f a X 5 \$ W [Y S ` ^ Y ? : W a q b j S f S ^ a X F d S 4 W f [5 Z B # S 5 " Z [# " W e W ? W V [U [` W

ABSTRACT Objective To explore the distribution and drug resistance of hospital-acquired pneumonia (HAP) patients with acute cerebral infarction (ACI). Methods A total of 272 HAP patients with ACI were enrolled in the study. All of them were tested for bacterial culture and drug sensitivity. The distribution of hospital-acquired pneumonia pathogens and drug resistance were analyzed. Results A total of 272 hospital-acquired pneumonia pathogens were isolated, including 6 ACI patients with HAP. The distribution of hospital-acquired pneumonia pathogens was as follows: *Staphylococcus aureus* 12 (4.4%), *Pseudomonas aeruginosa* 10 (3.7%), *Klebsiella pneumoniae* 8 (2.9%), *Acinetobacter baumannii* 7 (2.6%), *Enterobacter cloacae* 6 (2.2%), *Streptococcus pneumoniae* 5 (1.8%), *Legionella pneumophila* 4 (1.5%), *Moraxella catarrhalis* 3 (1.1%), *Corynebacterium jeikeium* 2 (0.7%), *Haemophilus influenzae* 1 (0.4%), *Mycobacterium abscessus* 1 (0.4%), and 10 (3.7%) were not identified. Conclusion The distribution of hospital-acquired pneumonia pathogens in ACI patients is diverse, and drug resistance is high. Therefore, it is necessary to strengthen the monitoring of hospital-acquired pneumonia pathogens and drug resistance in ACI patients.
